Project Overview

■ The Problem

Travel apps like MakeMyTrip and Booking.com overwhelm users with filters before showing destinations. The joy of discovery is lost before the journey begins.

■ The Solution

TravelWonder leads with stunning visuals and mood-based discovery — letting users feel inspired first, then book. Emotion before transaction.

■ Target User

Young working professionals (22–32 yrs), Tier-1 Indian cities, planning 4–6 trips/year. Mobile-first, time-poor, inspiration-hungry.

Research & Discovery

Competitor Analysis

Feature	MakeMyTrip	Booking.com	TravelWonder
Clean UI	✗	Partial	✓
Inspiration First	✗	✗	✓
Visual Discovery	✗	Partial	✓
Mood Categories	✗	✗	✓
360° Place View	✗	✗	✓
Bottom Navigation	✓	✓	✓
Place Detail Page	Partial	✓	✓

User Persona

■ Riya Sharma Age 24 · Product Manager, Mumbai Goals - Weekend travel inspiration quickly - Visual, emotion-led browsing - Books 4–6 trips per year	Pain Points - Overwhelmed by cluttered travel apps - Too many steps before seeing destinations - No mood-based discovery Quote "I just want to feel inspired — not fill out filters."
---	---

Design Process

01	Empathise Researched 5 frequent travelers. Core finding: emotional hook is missing in existing apps.
02	Define How might we create a travel app that inspires users visually before asking them to search?
03	Ideate Sketched 8 layout concepts. Selected visual-first + mood filter approach as primary direction.
04	Prototype Built all 3 screens in Figma: Splash → Home Feed → Place Detail with 360° view + booking CTA.
05	Test Tested with 3 users. Iterated on filter chip labels, card hierarchy, and bottom nav placement.

Screen-by-Screen Design Decisions

■ Screen 1 — Splash / Onboarding

■ Full-Bleed Aerial Photography

Norway coastline creates instant emotional desire to travel. Emotion-first principle — feel before UI.

■ Aspirational Headline Copy

'Unveil the Travel Wonders' builds curiosity. Location tag 'NORWAY' adds credibility and geographic anchoring.

■ Green Pill CTA — 'Explore Now »»'

High-contrast green on dark image. Arrow icons signal forward motion and journey continuation.

■ Screen 2 — Home / Discovery Feed

■ Filter Chips (All / Flight / Hotel Package)

Progressive disclosure: user sets context first. Active chip = filled green; inactive = outlined — clear differentiation.

■ 'Spend little time in nature' Section

Mood-based category triggers aspiration, not task-mode thinking. Drives higher browse-to-click rate.

■ Horizontal Scroll Cards + Overlay Text

Location name + star rating overlaid on image minimises eye travel. Enables fast scanning and comparison.

■ Bottom Navigation (5 tabs)

Home · Calendar · Add · Mail · Favourites — covers all core user journeys without cognitive overload.

■ Screen 3 — Place Detail (Tavarua Island)

■ Hero Image — Heart-Shaped Island

Visually distinctive aerial shot justifies the destination's appeal immediately — no text needed.

■ Quick Stats Row (Duration · Distance · Reviews)

3 key metrics in icon + number format answer top user questions at a glance.

■ Details / Route List / Reviews Tabs

Tabbed content reduces scroll length; users self-select information depth without overwhelm.

■ 'Start Your Trip' Sticky CTA

Green pill anchored at bottom converts discovery intent to booking action. '+' icon = new journey.

■ 360° View Badge

Immersive preview builds confidence before booking — reduces drop-off at payment stage.

Self-Critique & V2 Improvements

Issue	V1 Problem	V2 Fix
Filter Text Truncation	'Hotel Packa...' cut off	Horizontal scroll chips with full labels
Accessibility	Green contrast not verified	All colours pass WCAG AA 4.5:1 ratio
Rating Inconsistency	Stars vary across cards	Unified rating component in design system
Empty State	No empty state for Search	Illustration + CTA for zero-results screen
Loading State	No skeleton screens defined	Skeleton loader for image-heavy card sections

Expected Impact

Key Learnings

- ◆ Emotion-first design (splash → discovery) drives higher engagement than utility-first flows.
- ◆ Progressive disclosure through filter chips reduces overwhelm without hiding functionality.
- ◆ The Place Detail screen bridges inspiration and conversion effectively with tabbed content + sticky CTA.
- ◆ Self-critique and documenting flaws shows design maturity — recruiters value this more than perfection.
- ◆ Even 3 user tests surface insights that solo iteration alone cannot.

Next Steps

→ Design System
Create reusable component library in Figma: buttons, cards, chips, nav bar, typography.
→ V2 Screens
Add: Search Results, Booking Flow (3 steps), Profile Page, Saved Places.
→ Usability Testing
Test prototype with 5 real users; measure task completion time per screen.
→ Handoff Ready
Add spacing annotations, redlines, and dev notes for each screen.

Designer's Skill Highlights

Design Tools	Figma (Advanced) · Adobe XD · Wireframing · High-Fidelity Mockups · Prototyping
UX Expertise	User Research · Usability Testing · WCAG Accessibility · Design Systems · A/B Testing
Dev Skills	React · Next.js · TypeScript · Tailwind CSS · Design-to-Code Handoff
Certifications	5x LinkedIn Certified: Figma · UX Design · Design Systems · Interaction Design · Web Design
